

2.

INSTRUCTION CYCLE

CONCLUSION

Fetch, Decode and Execute together ensure successful program execution.

BUS ORGANIZATION

SINGLE BUS

CPU, Memory
& I/O
Share one
bus

Slower

More
Waiting

MULTI BUS

Separate buses
for CPU & I/O

Faster Transfer

Less
contention

HIERARCHIAL BUS

Multiple bus
levels.

Highest Speed.

Reduced
bottleneck

Efficient Communication

CONCLUSION:

Better bus organisation reduce communication delays and improve efficiency.

CONCLUSION

8086 Provides higher speed, larger memory and better instruction execution than 8085

NUMBER SYSTEM

BINARY (0-1)

Decimal (0-9), (A-F)

Machine Language

Compact Representation

Instruction Representation

Memory Storage

Data Conversion

CPU Interpretation

Program Execution

Debugging.
